

II_Project - Application Folder Structure Documentation

This document provides a comprehensive overview of the II_Project application folder structure, including descriptions of each main folder and its subfolders.

BengosRestaurantApp

WPF (Windows Presentation Foundation) application for restaurant management. This is the main desktop application for managing restaurant operations including menu display, order management, and table management.

bin

Contains compiled binaries and executable files (Debug/Release builds)

obj

Contains temporary object files generated during compilation

Billing&Payments

Contains billing and payment processing system for the restaurant.

Homework

Homework project for billing and payments implementation

bin

Compiled binaries for the billing application

obj

Temporary object files during compilation

Properties

Project properties and assembly information

DigitalClientMenu

Contains the digital client menu system - a web-based application that allows customers to view the restaurant menu via browser.

BengosMenu

ASP.NET Core MVC web application for displaying restaurant menu to customers. Accessible via browser at localhost:5000.

bin

Compiled binaries and dependencies

Controllers

MVC Controllers handling HTTP requests (HomeController, MenuController)

Data

Entity Framework database context (RestaurantContext) and data access layer

Models

Data models including Dish, Product (Product), and DishIngredient

obj

Temporary compilation files

Properties

Project properties including launch settings

Views

MVC Views (Razor templates) for rendering HTML

Home

Views for HomeController (Index page with welcome message)

Menu

Views for MenuController (categories listing and dish details by category)

Shared

Shared layout and partial views (_Layout.cshtml)

wwwroot

Static web assets served by ASP.NET Core

css

CSS stylesheets including site.css and custom styles

js

JavaScript files (site.js)

lib

Third-party libraries (Bootstrap, jQuery, jQuery Validation)

packages

NuGet packages for the old ASP.NET MVC version (being phased out)

inventoryWPF

WPF-based inventory management system (newer version).

inventoryWPF

Main WPF inventory application project

bin

Compiled binaries

obj

Temporary object files

Inventory

Windows Forms-based inventory management system (older version with spelling error in folder name). Manages product inventory, ingredients, and stock levels.

Inventory

Main WinForms application for inventory management

bin

Compiled binaries and executable

obj

Temporary compilation files

Properties

Project properties and settings

Staff_Management

Staff management system for handling employee information, schedules, and payroll.

hw1

Main staff management application (Windows Forms)

bin

Compiled binaries

obj

Temporary object files

Documentation

Project documentation folder containing technical documentation, specifications, and reports about the application.

packages

Solution-level NuGet packages folder containing dependencies for various projects (Entity Framework, Bootstrap, jQuery, etc.)

Antlr.3.5.0.2

ANTLR parser generator library

bootstrap.5.2.3

Bootstrap CSS framework for responsive web design

EntityFramework.6.5.2

Entity Framework ORM for database access

jQuery.3.7.0

jQuery JavaScript library

jQuery.Validation.1.19.5

jQuery validation plugin

Microsoft.AspNet.Mvc.5.2.9

ASP.NET MVC framework (legacy)

Microsoft.AspNet.Razor.3.2.9

Razor view engine

Microsoft.AspNet.Web.Optimization.1.1.3

Bundling and minification

Microsoft.AspNet.WebPages.3.2.9

ASP.NET Web Pages framework

Microsoft.CodeDom.Providers.DotNetCompilerPlatform.2.0.1

Roslyn compiler platform

Microsoft.jQuery.Unobtrusive.Validation.3.2.11

Unobtrusive validation for jQuery

Microsoft.Web.Infrastructure.2.0.0

Microsoft Web Infrastructure

Modernizr.2.8.3

Modernizr JavaScript library for feature detection

Newtonsoft.Json.13.0.3

JSON framework for .NET

QRCoder.1.8.0

QR code generation library (removed from main app)

WebGrease.1.6.0

Web Grease optimization library

Project Summary

II_Project is a comprehensive restaurant management system built with multiple technologies:

- • WPF (BengosRestaurantApp) - Main desktop application
- • ASP.NET Core MVC (BengosMenu) - Web-based digital menu
- • Windows Forms (Inventory, Staff_Management) - Legacy management tools
- • WPF (inventoryWPF) - Modern inventory management
- • Total main folders: 8
